## The problem

As you can see, the document compilation to html, is perfect, until we try to change our font. If i change to a small font like this, the translation to html, will generate a blank space. In our next change, like this... we will have the same problem. Click Next Page

[Next Page](#)[Previous Page](#)

## The problem

If we change the font two times in the same row, still the same problem.

If we write  $q_1$  and  $q_2$  and  $q_3$  and  $q_4$ ...

or even if we try  $2\vec{\omega}_{ib} \times \frac{bd}{dt} \vec{r}$

the "translation" is perfect except these spaces... (There is also a small "white skip" at the end of the buttons that probably comes again of the font change)
